t-Secondary Grant Colleges Joint Diploma Examination, 1962

June 18, 1962. 9:30 а.ш. - 1:00 р.д. Attempt all THREE questions.

an essay on ONE of these topics: (a) Man's conquest of space R(b) "Letters to the Editor" (c) The new skyline of Hong Kong d) Craftsmanship in a Machine-age .

(e) Horizons (f) The refugee problem (g) The rights and wrongs of immigration controls (h) "Abolish all censorship!"

a precis, about 250 words long; as far as possible in "your ords", of this passage:-

LORD MOUNTDRAGO

ford Mountdrago had many good qualities. He had intelligence and atry. He was widely travelled and spoke several languages fluently. early youth he had specialized in foreign affairs and had Solentiously made himself acquainted with the political and economic unstances of other countries. He had courage, insight and mination. He was a good speaker, both on the platform and in the clear precise and often witty. He was a brilliant debater and Elft of repartee was celebrated. He had a fine presence; he was a handsome man, rather bald and somewhat too stout, but this gave solidity and an air of maturity that were of service to him. As a s man he had been something of an athlete and had rowed in the and he was known to be one of the best shots in England, Wenty-four he had married a girl of eighteen whose father was a and mother, a great American heiress, so that she had both position wealth, and by her he had had two sons. For several years they had d privately apart, but in public united, so that appearances were and no other attachment on either side had given the gossips sion to whisper. Lord Mountdrago indeed was too ambitious, too hard-Ung and it must be added too patriotic, to be tempted by any Sures that might interfere with his career. He had in short great Wifications to make him a popular and successful figure. He had un-Munately great defects. was a fearful snob. You would not have been surprised at this if

lather had been the first holder of the title. That the son of an distiller should attach an inordinate ortance to his rank is understandable. The earldom held by Lord Atdrago's father was created by Charles II. and the barony held by first earl dated from the War of the Roses. For three hundred years successive holders of the title had allied themselves with the HOMENest families of England. But Lord Mountdrago was as conscious of 野四五九一第 oirth as a nouveau riche is conscious of his money. He never missed Prortunity of impressing it upon others. He had beautiful manners he chose to display them, but this he did only with people whom he arded as his equals. He was coldly insolent to those whom he looked as his social inferiors. He was rude to his servants and insulting As secretaries. The subordinate officials in the government offices hich he had been successively attached feared and hated him. His gance was horrible. He knew that he was a great deal eleverer than of the persons he had to do with, and never hesitated to apprise of the fact. He had no patience with the infirmities of human we. He felt himself born to command and was irritated with people expected him to listen to their arguments or wished to hear the ons for his decisions. He was immeasurably selfish. He looked upon service that was rendered him as a right due to his rank and lligence and therefore deserving of no gratitude. It never entered head that he was called upon to do anything for others. He had enemies; he despised them. He knew no one who merited his assistance. Sympathy or his compassion. He had no friends. He was distrusted by Ohiefs; because he was overbearing and discourteous; and yet his was so great, his patriotism so evident, his intelligence so and his management of affairs so brilliant that on occasion he be enchanting: when he was with persons whom he considered his

vals, or whom he wished to captivate, in the company of foreign Shitaries or women of distinction, he could be gay, witty and debonair; manners then reminded you that in his veins ran the same blood as run in the veins of Lord Chesterfield; he could tell a story with At, he could natural, sensible and even profound. You were surprised, the extent of his knowledge and the sensitiveness of his taste. Your ought him the best company in the world; you forgot that he had Rulted you the day before and was quite capable of cutting you dead next --- W. Somerset Maugham. The Mixture as Before.

bdy the following bassage and answer the questions below: Scientific Knowledge

Scientific knowledge differs from the workaday knowledge of everyday mainly in being more systematic and more thoroughgoing. It can be ysed into three processes.

(1) Knowledge is recognition - this is a walking-stick; that is a the other thing looks like an insect, but of a kind I have not seen ore. That is to say, knowing means noting in regard to any object it is like or unlike, or partly like and partly unlike, something eady known. Knowing, then, in the first place consists in discovering Fight class in which a thing should be placed. Knowledge is

(2) But that is not all. To understand a motor-car I fix my attention the different parts of which it is made up. I also note carefully how fit together into a single whole. The body, the wheels, the brakes, engine and every one of those innumerable component parts, must be died individually and also in their relation to one another and to whole, Scientific knowledge differs from popular in that this process) carried further. The chemist analyses a drop of water into molecules oxygen and hydrogen; the physicist takes up the task and resolves the of which these gases are composed into little solar systems of

tone and electrons. Knowledge is analysis. (3) There is a third stage. Knowledge attempts to give an answer to Question, Why? I am awakened by a noise. Is it something rattling in Wind, or perhaps a burglar? Listening intently, I gather new facts. teems to come from near the floor in a corner of the room. It has the The of gnawing. I frame a bypothesis. It must be a rat. Rate, I know, ghaw wood at night, and I account for this particular noise on the that it is a particular instance of that generalised observation. ledge is explanation or to take an example from the high realms of

Pince Newton showed how the observed facts as to the motion of the Buets round the sun. of the moon round the earth, and the (corrected) Birvations as to the mass of earth and moon would be accounted for by Expothesis that every material object in the Universe attracts : other with a force varying directly with the product of their and inversely with the square of their distance. Since innumerable subsequently observed were found to accord with this hypothesis until quite recently - none that conflicted with it, the hypothesis. this particular uniformity of behaviour as between material objects of universal validity, seemed to be established. It therefore ceased styled hypothesis and was referred to as a Law. When individual are seen as particular instances of a general rule, or when two such general rules are seen as instances of some still more fel rule, then from the point of view of scientific knowledge they daid to be explained The general rules, or uniformities of behaviour bings or classee of things, are commonly spoken of as Laws of Nature. fown of scientific knowledge is the discovery of such laws. Scienti-

hation by reference to general laws. The method, then, of Science is to take the individual concrete thing, (A) to assign it to a class. (b) to split it up into its component and (c) to see everything about it as a particular instance of some Praal law. But the method of Science is only a systematic and clearway of doing what half-obnsciously and in a rule-of-thumb way we to in everyday life. whenever we use our minds to 'know'.

Anowledge is the discovery of such laws. Scientific knowledge then is

Rhetonio - Page 7)

For each of the 9 words, phrases or clauses underlined give another word or phrase or clause meaning approximately the same and such as to fit syntactically into the same place in the sentence.

Explain briefly how the stages of knowledge might be applied to one of these situations:

Chan Ho was found at the roadside beside an overturned car: one tyre of the car was punctured; there were skid marks. Chan Ho was found in his roof-top hut severely cut; the building overlooked a playground; a baseball ball was found on the roof; glass from the hut's single window was on and

round Chan. (iii) Chan Ho played a record on his electrical record-player and the music was accompanied by a rattling noise he had not previously neard when playing his records.

Post-Secondary Grant Colleges Joint Diploma Examination, 1962

18th June, 1962. BIOLOGY 2.00 to 5.00 p.m. Paper I (Botany) for Major Students. ... Answer FIVE questions only. Illustrate your answers with large

clear diagrams where appropriate. 1. Give an account of our present concept of the formation and structure of the plant cell-wall and discuss briefly the ways in which the wall may become modified during the maturation of the various types of plant cells.

2. Give a comparative and critical account of the systems of Classification proposed by Hutchinson and by Engler and Prantl.

3. Give a brief account of the principles and practice of plant nomenclature, Show that you appreciate the difference between nomenclature and taxonomy.

Give an illustrated account of either the process of clamp formation in a basidiomycete or of the process of asous formation in a named ascomycete. Discuss the probable significance of this process in the life of the fungi concerned.

5. By reference to named examples discuss somatic and sexual evolution in the Chlorophyta.

6. Give an account of the evidence which suggests that organic substances are transported through sieve-tubes. Discuss the mechanisms which have been proposed to explain this transport.

7. Give a critical account of the phenomenon of water movement through a tall, woody plant, from its entry into the root system to its emergence as water vapour from the stomatal apertures of the leaves.

What are the phenomena of transformation and transduction? Show how the study of these phenomena has contributed to our basic knowledge of the gene and to our understanding of the role of D.N.A.

Hong Kong Chinese School Certificate Examination, 1962

English Paper III (Answer ALL questions)

Study the following passage carefully and answer in your own words "he questions listed below:

"I am a punctual man," says Father, "or I wouldn't have been where I am." He is standing on the steps leading to the lobby of the theatre, though he is referring to his position as a head olerk in a leading firm, a post which Mother always says makes him feel like sitting on top of the world.

'Time allowed: 2 hours.'

"I know, dear," says Mother, fumbling in her handbag, "your punctuality has always made just that difference."

Just what difference?" shouts Father, rather unreasonably. think, seeing that Mother is trying to concentrate on finding the tickets.

"You might still be a junior elerk in the office," explains Mother in a weary but penetrating voice.

. Now, this is silly of Mother, because Father has pointed out that the managing-directors of his firm are coming with their wives to the same Gala Premiers and he won't like to be late on

this particular occasion. "All the same," says Mother, "you must admit that I usually know where a thing is when I put it down. Let me see, you gave me the tickets yesterday"

For the first; time in his life. Father was late, for he had to drive home to fetch the tickets.

That unhappy incident could have been avoided, if she had put the tickets in her handbag instead of following Father's advice 'to find a place for everything and to keep everything in its place', as Father always insists in connection with scientific management of which he takes pride in being an expert.

(a) What made Father successful in his business career?

(b) What was "that unhappy incident"?

(c) What did Father exactly mean when he said "or I wouldn't have been where I am'?

(d) Explain in your own words the phrases underlined in the

(e) Write down the meaning of the following words or phrases as used in the passage: punctual, particular, Gala Premiere, fetch, a junior clerk. incident, insists, instead of, in connection

2. Translate the following into Chinese:

The box was empty except for a few sheets of music. Edward climbed inside and sat down. It was like a nice little house and there was plenty of room even if he were to lie down. In less than . ten minutes he was asleep.

He was awakened some hours later by a bright light and the sound of voices. He sat up in the box and saw three men staring down at him; he was very frightened. This was not what he had intended. He had meant to orawlout before they came and sit in the front row. Now what would happen? Probably the manager. or worse still, a policeman would be called and he would be told never to set foot in the cinema again. At the thought of not being able to see the coloured picture, he could not help crying. Two big tears rolled down his cheeks as he looked up timidly at the men.

3. Translate into English ONE of the following:

凡是艱難的功課一時解決不了的人們總要想 到這一條路上去: 現在解決不了就待日後解決吧好 在事情並不十分急促'但是十分急促的一天終於會來的。 它既来了艱難的程度卻依然如故,於是除了麻亂逃焦 慮再沒有别的辦法了.現在叔雅就是在這一種境界裏: 看他黄且乾的额上畫着好些短條的皺紋, 梳好的髮搔 得逢逢的像野草一般可知他心裏怎樣地踌躇與焦

關公飲数杯酒事,一面仍無為良弈棋,伸臂令吃 割之, 定取头刀在手,令一小校,棒一大盤於臂下接血,定 曰: 「某便下手君侯勿谋"公曰: 、任汝贵治吾豈比世間 俗子,腥痛者耶?吃了下刀,割開皮肉直至於骨骨上已 青:此用刀刮骨悉悉有聲帳上帳下見者皆掩面失色。 公飲酒食內談笑弈棋全無痛苦之色,

Post-Secondary Grant Colleges Joint Diploma Examination, 1962 BIOLOGY 2.00 to 5.00 p.m.

Paper ? (Botany) for Minor Students.

Answer FIVE questions only. Illustrate your answers with large clear diagrams were appropriate.

By reference to named examples discuss somatic and sexual evolution in the Chlorophyta.

Give an account of sexual reproduction in the Phycomycetes. Comment upon the possible evolutionary and adaptational significance of any

trends that may be observed in this phenomenon. Give an account of the evidence which suggests that organic

substances are transported through sieve-tubes. Discuss the mechanisms which have been proposed to explain this transport. Give a critical account of the phenomenon of water movement through

a tall; woody plant, from its entry into the root system to its emergence as water vapour from the stomatal apertures of the leaves. In maize, strain I and strain II differ by a single segmental interchange. I is genetically as and II is AA. The F, from a cross

between them is semisterile and As. When this is crossed back on strain I, the following offspring are produced: 35 per cent normal, a; 85 per cent semisterile, A; 15 per cent normal, A; 15 per cent semisterile, a. Where, with reference to locus a, is the translocation point?

What are the phenomena of transformation and transduction? Show how the study of these phenomena has contributed to our basic knowledge of the gene and to our understanding of the role of D.N.A. Define the term Stele. By reference to named examples indicate the

course of stelar evolution in the pteridophytes. What do you understand by the termalternation of generations. Discuss the manifestation of this phenomenon in the major groups of plants.
